5a. Doc. Revision	Pre-Release 1			
6. Name of RID Team		SLS RID Review Team		
7. Problem				
Page 33, section 2.2.10.1.13, the term "selected keyboard and pointing device actions" requires clarification.				
8. Recommendation				
Replace "selected" with "all". The RTPS should record all keystrokes/devices/control panel actions associated with command and control HCI. The term selected needs to be defined.				
9. Impact if recommendation not implemented				
Users must have the capability to record and retrieve all keystroke, control panel actions and device actions at the HCI especially command and control. This function is heavily used for troubleshooting.				
10. Team Recommendation		11. Action Required

Response Attachment 200-357

The problem statement in this RID requests a change that is believed by the CLCS design team to be invalid for the following reasons:

1. Many of the actions that can be performed at a CCMS keyboard are not recorded until an action is taken that transmits the action to the Console for action (e.g., transmit cursor, etc.). The RTPS requirement is intended to operate at the same level and will be controlled in product specification design panel reviews.
2. Accepting the recommendation would likely preclude many COTS SW products from being selected by the CLCS team.
3. As such the requirement is a potential cost driver.
4. The design template for developed SW will require each entry that can be made to a CSC to be defined and a specific decision definition made for what is to be recorded to the local media and the SDC. This portion of the design will be required to be presented to the Design Panel audience for review and approval.

The RID Management Team agrees with this assessment. The RID is therefore rejected. Thank you for reviewing the SLS and submitting your RID. Even though we rejected this RID, your input is valuable and we appreciate it.
